Einstufung von Organismen: Zelllinien

Entwurf 2007

Einstufung von Organismen: Zelllinien. 2007

Autoren

Nadine Keller, Sabine Kuratli, Samuel Roulin und Urs Spahr (Bundesamt für Gesundheit)
Sabrina Leuenberger und Carmen Spycher (Bundesamt für Umwelt)
Karoline Dorsch (Eidgenössische Fachkommission für biologische Sicherheit)
Ursula Jenal (Jenal & Partners Biosafety Consulting, Rheinfelden)

Entstehung der Liste

Die SKBS publizierte im August 1995 in ihren Richtlinien für das Arbeiten mit gentechnisch veränderten Organismen Listen häufig verwendeter Zellen und Zelllinien und ihre Einteilung in die Risikogruppen 1 – 3. In der Zwischenzeit hat nicht nur die Anzahl der verwendeten Zelllinien sondern auch das Wissen über diese Zellen massiv zugenommen. Damit hat sich eine Überarbeitung und Ergänzung der SKBS-Listen aufgedrängt. Auf Initiative des BAG wurden die Zelllinien, die im Rahmen von Meldungen und Bewilligungsgesuchen beim BAFU erfasst wurden, in einer Liste zusammengetragen. Für jede Zelllinie wurden Informationen zur Einstufung in kommerziellen Zellbanken (ATCC, ECACC, DSMZ, ICLC), Publikationen oder anderen Organismenlisten recherchiert und eine Einstufung in eine Gruppe vorgenommen. Experten der EFBS haben die Liste Anfang 2007 begutachtet. Weitere involvierte Fachstellen wurden im Rahmen einer Vernehmlassung im Frühling 2007 angehört.

Terminologie

Die Bezeichnung der Zelllinien stützt sich auf die ATCC-Terminologie. Wo ATCC Synonyme aufführt, wurden diese ebenfalls übernommen. Wenn weder bei ATCC, DSMZ, ECACC noch ICLC Informationen verfügbar sind, wird auf eine Publikation verwiesen. In einigen wenigen Fällen sind Zelllinien ohne Informationsangabe eingestuft, wobei in diesen Fällen die Einstufung von der ZKBS oder der SKBS von 1995 übernommen wurde.

Abweichungen zu anderen Listen

Abweichungen zur Einstufung in der SKBS-Liste 1995 oder in europäischen Listen erklären sich aus dem aktuellen Stand des Wissens, den die Autoren bemüht waren einzuholen. Ebenso sind Abweichungen von den Empfehlungen ATCC möglich. Die ATCC empfiehlt BSL2, sobald Fremdgenomanteile (z.B. EBV oder SV40) nachgewiesen sind, auch wenn keine Viruspartikel gebildet oder ausgeschieden werden. Für die vorliegende Liste war die Produktion von Viruspartikeln die Voraussetzung für die Einstufung einer Zelle in die Gruppe 2.

Anwendung der Liste

Die Liste ist eine Orientierungshilfe bei der Klassierung von Tätigkeiten und ersetzt die Risikobewertung nicht. Die angegebene Gruppenzuordnung bezieht sich auf Zelllinien, die aus einer „vertrauenswürdigen“ Quelle stammen und kann lediglich als Ausgangspunkt für die Risikobewertung und Klassierung einer Tätigkeit dienen. Der Verwender und die Verwenderin müssen für die Risikobewertung ihrer konkreten Tätigkeit weitere Faktoren berücksichtigen, wie mögliche bereits vorhandene Kontaminationen (Geschichte der Zellkultur), Kontaminationsmöglichkeiten im eigenen Labor (andere verwendete Organismen im Labor, Verwendung tierischen Serums im Nährmedium) und insbesondere die Konsequenzen, die sich im Zusammenhang mit ihrer beabsichtigten Tätigkeit ergeben könnten, wie z.B. die Rekombination mit Fragmenten von vorhandenen viralen Nukleinsäuresequenzen. Es sei daran erinnert, dass die Risikobewertung wiederholt werden muss, wenn eine Tätigkeit wesentlich ändert oder wesentliche neue Erkenntnisse vorliegen (Art. 8 ESV).

Referenz/Aktenzeichen: O391-2072

Für die Einstufung von Arbeiten mit etablierten Zelllinien und primären Zellkulturen verweisen wir auf die Richtlinien der Eidgenössischen Fachkommission für biologische Sicherheit (EFBS) für das Arbeiten mit Zellkulturen¹.
